INTRODUCTION:

1.1 Project overview: CRM Application for Jewelry Management

Project Objective:

To develop a comprehensive, cloud-based CRM application using **Salesforce** that caters specifically to the unique requirements of jewelry businesses—enhancing customer relationship management, inventory tracking, sales processes, and post-sales services.

1.2 Purpose

The purpose of this CRM application is to help jewelry businesses **manage their customers, sales, and inventory more efficiently** using Salesforce.

It is designed to:

- Keep all customer information in one place
- Track jewelry products and stock
- Make sales and follow-ups easier
- Handle repairs and after-sales service
- Improve customer service with personalized communication

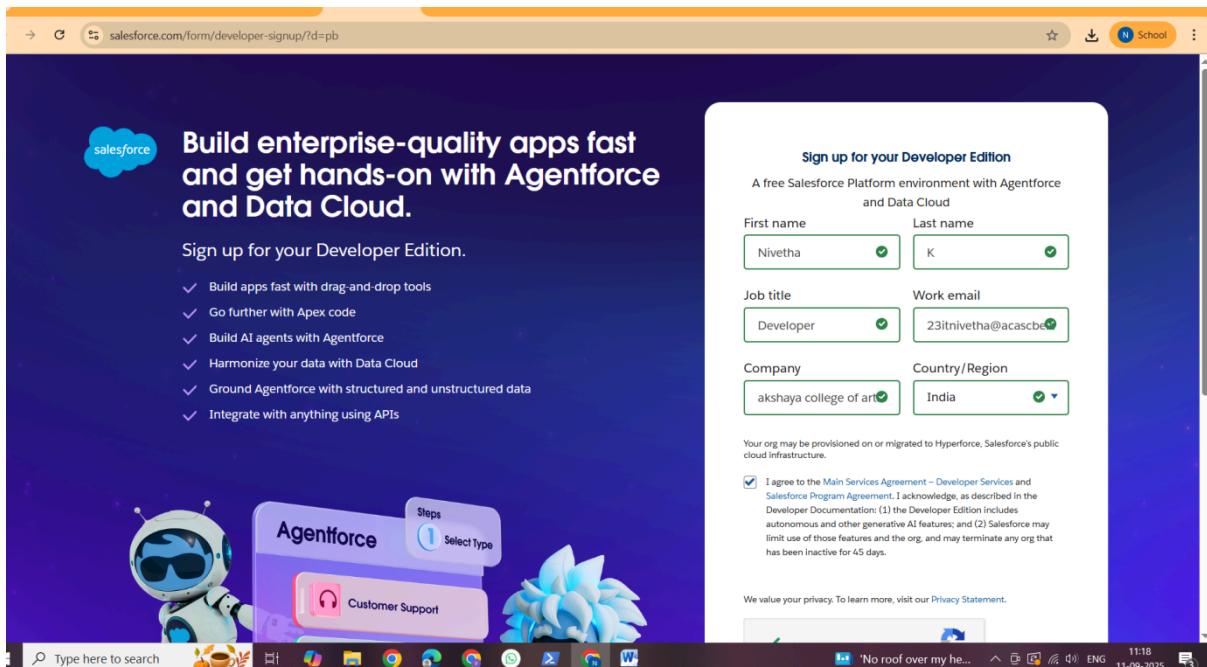

This system helps jewelry stores save time, reduce manual work, and build stronger relationships with their customers.

Development phase

Creating developer account:

By using this URL-

<https://developer.salesforce.com/signup>

The screenshot shows the Salesforce Developer Edition sign-up page. The left side features the Salesforce logo and the text "Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud." Below this, it says "Sign up for your Developer Edition." and lists several benefits: "Build apps fast with drag-and-drop tools", "Go further with Apex code", "Build AI agents with Agentforce", "Harmonize your data with Data Cloud", "Ground Agentforce with structured and unstructured data", and "Integrate with anything using APIs". The right side is a form titled "Sign up for your Developer Edition" with the subtitle "A free Salesforce Platform environment with Agentforce and Data Cloud." The form fields are: First name (Nivetha), Last name (K), Job title (Developer), Work email (23itnivetha@acascbe), Company (akshaya college of art), and Country/Region (India). There is a checkbox for "I agree to the Main Services Agreement - Developer Services and Salesforce Program Agreement" which is checked. Below the form, it says "Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure." and "We value your privacy. To learn more, visit our Privacy Statement."

1.3 Creating a object:

1.6 Creating Picklist Field in Item Object

The screenshot shows the Salesforce Setup interface for creating a new custom field for the Item object. The left sidebar contains a navigation menu with options like Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Scoping Rules. The main content area is titled "New Custom Field" and is in "Step 2 of 4: Enter the details". The "Field Label" is set to "Item Type". Under the "Values" section, the option "Enter values, with each value separated by a new line" is selected, and a text area contains "Gold" and "Silver". There are checkboxes for "Display values alphabetically, not in the order entered", "Use first value as default value", and "Restrict picklist to the values defined in the value set" (which is checked). The "Field Name" is "Item_Type" and the "Description" field is empty.

<input type="checkbox"/>	Clone Agentforce Service Agent User	Analyze topics and perform actions as an autonomous AI service agent.	Agentforce Service Agent User

2.4 Create a Trigger Handler class

CODE:

```
public class UpdatePaidAmountTriggerHandler {
    public static void handleBeforeInsert(List<Billing__c> newBillings) {
        for (Billing__c billing : newBillings) {
            billing.Paid_Amount__c = billing.Paying_Amount__c;
        }
    }

    public static void handleBeforeUpdate(Map<Id, Billing__c> oldBillingsMap,
    List<Billing__c> updatedBillings) {
        for (Billing__c billing : updatedBillings) {
            Billing__c oldBilling = oldBillingsMap.get(billing.Id);
            Decimal oldPaidAmount = oldBilling.Paid_Amount__c;
            billing.Paid_Amount__c = oldPaidAmount + billing.Paying_Amount__c;
        }
    }
}
```

Create the trigger

CODE:

```
trigger UpdatePaidAmountTrigger on Billing__c (before insert, before update) {
    if (Trigger.isInsert) {
        UpdatePaidAmountTriggerHandler.handleBeforeInsert(Trigger.new);
    } else if (Trigger.isUpdate) {
        UpdatePaidAmountTriggerHandler.handleBeforeUpdate(Trigger.oldMap,
        Trigger.new);
    }
}
```

[2.5 Create a Record \(Jewel Customer\)](#)

[2.6 Create Report](#)

2.8 Create a Flow

Configure Start

Select Object

Select the object whose records trigger the flow when they're created, updated, or deleted.

* Object

Item

Configure Trigger

* Trigger the Flow When:

☐ A record is created

☐ A record is updated

☒ A record is created or updated

☐ A record is deleted

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Condition Requirements

Cancel

Done

2.9 Functional and performance testing

Functional Testing (What it does)

We checked if the CRM system works correctly:

- Can add and edit customer details
- Can manage jewelry items and check stock
- Can create and send quotations and convert to sales
- Can track repairs and warranties
- Reports and dashboards show correct data
- Automated emails and reminders are sent at the right time.

Performance Testing (How fast it works)

We tested how well the system performs:

- Loads pages quickly, even with many users
- Handles large amounts of data (customers, inventory)
- Automation and flows run smoothly without delays
- External services (like email/SMS) respond quickly.

3.0 Advantages

- **Centralized Customer Data**
All customer information is stored in one place for easy access.
- **Better Sales Tracking**
Easily manage leads, follow-ups, quotations, and sales.
- **Personalized Customer Service**
Send birthday wishes, offers, and reminders automatically.
- **Faster Service & Repairs**
Manage repairs, warranties, and after-sales service smoothly.
- **Real-Time Reports & Insights**
Get clear reports on sales, inventory, and customer trends.
- **Time-Saving Automation**
Reduce manual work with automated workflows and alerts.
- **Scalable & Cloud-Based**
Easily grow your business without worrying about infrastructure.

3.1 Disadvantages

- **High Initial Cost**
Salesforce licensing and customization can be expensive for small businesses.
- **Learning Curve**
Staff may need training to use the system effectively.
- **Customization Time**
Tailoring the system to specific jewelry business needs can take time and effort.
- **Dependency on Internet**
Being cloud-based, the system requires a stable internet connection at all times.
- **Limited Offline Access**
Most features are not available without an internet connection.
- **Integration Challenges**
Connecting with third-party apps (like POS or accounting software) may require extra development.

3.2 Conclusion

The Jewelry CRM application built on Salesforce provides an effective solution for managing customers, sales, inventory, and after-sales services in the jewelry industry. It helps businesses improve customer relationships, automate daily tasks, and make better decisions through real-time data and reports. Although there are some challenges like cost and learning curve, the overall benefits—such as improved efficiency, personalized service, and scalability—make it a valuable tool for modern jewelry businesses. This CRM system supports long-term growth and helps jewelry stores deliver a better, more professional customer experience.
